

San Rafael, California October 9, 2015

Dear FCC,

RE: Comment about Proceeding Number: 15-170

My name is Daniel Arauz from San Rafael, CA.

The intention of my letter is to ask you, to please, allow manufacturers to continue to build and sell unlocked wireless routers. By allowing this, individuals and communities of software engineers continue to have the opportunity to improve performance and security aspects of these devices.

These improved devices are not only helping to provide privacy to individuals and organizations, but also can be used in cases of natural disasters, when our government could not have the resources or personal or capacity to reach to care of its citizens in need.

Thank you for your attention.

Sincerely,

Daniel Arauz  
Technology Support Technician
